

# FOAM FIRE EXTINGUISHER

## TYPE: FRSE-F6

# OPERATING INSTRUCTIONS

### Starting Instructions:

- Step 1: Remove the fire extinguisher from the holder!
- Step 2: Pull out the valve fuse!
- Step 3: Grab the hose with one hand and point it at the fire!
- Step 4: Squeeze the valve lever with your other hand!

### Use:

The FRSE-F6 fire extinguisher is certified to extinguish the following types of fire:

**Class A:** 34A – fires of solids, especially of organic origin, the burning of which is usually accompanied by glowing.

**Class B:** 183B – fires of liquids or substances transitioning into a liquid state.

**Class C:** Gas fires (without testing in accordance with EN3).

**Class D:** Light metal fires + lithium extinguishing.

**Class F:** 75F – edible fats and oil fires.

### How to extinguish:

Intervention with a fire extinguisher during a fire must always be carried out in the direction of the wind and the ejection jet must always be directed to the source of the fire, or to burning objects, not to the flames, while it is necessary to follow the fire at all times. Keep a sufficient distance from the fire, be careful not to transfer the flames to undesirable places with the extinguishing agent jet. To extinguish the fire, proceed from the bottom up. After extinguishing, be careful not to re-ignite.

### Controls:

The device must be kept in proper technical condition. Fire extinguishers are inspected at least once a year and after each use. Inspections, repairs and filling of fire extinguishers may only be carried out by persons with professional qualifications who possess a document authorising them to perform the above activities, issued by the manufacturer of the FRSE-F6 fire extinguisher. Once every 3 years, it is necessary to carry out an examination according to § 9 of Decree No. 246/2001 Coll.
